## *Introduction*

---

This is a book created from markdown and executable code.

Here's a basic plot:

```
import numpy as np
import matplotlib.pyplot as plt

r = np.arange(0, 2, 0.01)
theta = 2 * np.pi * r
fig, ax = plt.subplots(
    subplot_kw = {'projection': 'polar'}
)
ax.plot(theta, r)
ax.set_rticks([0.5, 1, 1.5, 2])
ax.grid(True)
plt.show()
```

**Figure 1.1:** A line plot on a polar axis.

See Knuth (1984) for additional discussion of literate programming.

## 2

### *Summary*

In summary, this book has no content whatsoever.
